Accessibility Statement

macle GmbH strives to make its website macle.com accessible in accordance with the national legislation implementing Directive (EU) 2016/2102 of the European Parliament and of the Council.

Status of compliance with the requirements

This website is partially compliant with the requirements of the harmonized European Standard EN 301 549 V2.1.2 (08-2018) and the Web Content Accessibility Guidelines (WCAG) 2.1 Level AA.

The current status of non-compliance is due to the deficiencies listed below, which were identified during a technical review on June 1, 2026.

Non-accessible content

The content listed below is not accessible for the following reasons:

1. Wahrnehmbarkeit (Grafiken und Kontraste)
    - Alternative text: Many images on the website do not have alternative text (alt attribute), or the alternative text provided is not meaningful. Screen reader users are therefore unable to perceive the content of these images.
    - Contrast: Text has been identified that is placed over background images, resulting in insufficient contrast ratios and reduced readability. This has been classified as a high-priority issue.
    - Color: Some elements use foreground colors without corresponding background color definitions.
2. Bedienbarkeit (Tastatur und Navigation)
    - Focus order & visibility: Keyboard navigation is partially restricted. In some areas, the focus indicator is not visible or the focus order is not logical.
    - Empty links: Clickable elements (links and buttons) were found that sometimes have no text description or href target (e.g. empty anchor tags), making them unusable for assistive technologies.
    - Semantics: Content that visually appears as lists is technically marked up as paragraphs (<p>) rather than lists (<ul>/<ol>), which makes the structure more difficult for screen readers to interpret.
3. Formulare
    - Missing labels: The required labels or instructions are missing for some form elements. Users of assistive technologies therefore often do not know what input is expected.
    - Error identification: Automatic error detection and error messages for invalid form input are insufficiently implemented.
4. Robustheit (Technische Umsetzung)

- Code validity: Identical IDs have been assigned multiple times to different elements on the same page (e.g. #product-action-quantity-group...). This leads to errors when the page is processed by assistive technologies.

Preparation of this statement

This statement was prepared on June 1, 2026. The assessment is based on an automated evaluation using software tools.

Feedback and contact

Have you noticed any deficiencies regarding the accessibility of content on our website? If so, please feel free to contact us.
